

BRET REDMAN

Khalid Yousuf, M.D.

HIP AND KNEE SURGERY, JOINT REPLACEMENT

One of many things Dr. Khalid Yousuf's patients enjoy about their visits with him is that they can cover a wide range of interesting topics. Of course, they'll discuss their conditions and treatments, but they also talk about everything from their families to cars. Dr. Yousuf can relate to his patients. A father of three daughters, he is also an avid car enthusiast. In fact, in his younger years, he used to quarter-mile race his Trans Am. "I bring a relatable element to my practice that patients appreciate," Dr. Yousuf says.

Named among the Best Doctors in Dallas and Collin County numerous times, Dr. Yousuf was recently honored with the Anterior Hip Foundation Traveling Fellowship. "My belief is that to become a better physician, you need to keep learning from even more experienced surgeons," he says. "Through this fellowship, I have been able to travel and learn from some of the best surgeons in our field. I've done more than 1,000 joint replacements, but I want to be in surgery with those who have done 5,000 or even 10,000. It's exciting to bring the latest techniques to my patients."

Dr. Yousuf utilizes technological advancements to offer his patients relief from joint pain, including partial and custom knee replacements and anterior hip approach. His management of knee and hip pain begins with a nonsurgical, holistic approach, which includes therapy, medication, and injections. Dr. Yousuf says, "Enabling people so that they can stay active and independent is truly rewarding."

Dr. Yousuf, board certified in orthopedic surgery, is involved with many academic and national orthopedic societies and serves as an adjunct assistant professor at Texas A&M University. He and his family feel a calling to serve their community, and he is passionate about helping the underserved, which includes traveling abroad annually to perform joint replacements for those in need, among other philanthropic endeavors.
